8

The minimum error dispersion at time t is derived as

$$D_x^*(t) = R_{n,n}(t, t) - \int_0^t W(t, \tau_1) d\tau_1 \int_0^t W(t, \tau_2) [R_{n,n}(\tau_1, \tau_2) + R_{n,n}(\tau_2, \tau_1)] d\tau_2$$

The importance of criticality of such a system arises because of possible deviations of either the inputs or of the system characteristics from those used in the synthesizing process. The performance of a real system in a real environment may be compared with the ideal system in an ideal environment through a coefficient

$$\alpha = \frac{D_x^* - D_x^o}{D_x^*}$$

where

$$D_x^o(t) = R_{n,n}^o(t, t) + \int_0^t W(t, \tau_1) d\tau_1 \int_0^t W(t, \tau_2) [R_{n,n}^o(\tau_1, \tau_2) + R_{n,n}^o(\tau_2, \tau_1)] d\tau_2 - 2 \int_0^t W(t, \tau_1) R_{n,n}^o(t, \tau_1) d\tau_1 ;$$

or a real system in a real environment may be compared with a system which is optimal for the real environment (operating in the real environment) through a coefficient

$$\beta = \frac{D_x^* - D_x^{**}}{D_x^*} (> 0)$$

Card 3/4

L 13912-66

ACC NR: AT5028843

where

$$D_x^*(t) = R_{x,x}^*(t, t) - \int_0^t W^*(t, \tau_1) d\tau_1 \int_0^t W^*(t, \tau_2) [R_{x,x}^*(\tau_1, \tau_2) + R_{x,x}^*(\tau_2, \tau_1)] d\tau_2,$$

To solve the problem of synthesizing the dynamic characteristics, either the minimax method of K. Khelstren (Statisticheskaya teoriya obnaruzheniya signalov. M., Mashgiz, 1963, s. 426) or the averaging method over all possible deviations of the system characteristics and inputs may be used. The former method is normally not practical, while the latter yields equations for the averaged characteristics of the form

$$\int_0^t W(t, \tau_2) [\bar{R}_{x,x}(\tau_1, \tau_2) + \bar{R}_{x,x}(\tau_2, \tau_1)] d\tau_2 = \bar{R}_{x,x}(t, \tau_1),$$

where

$$\bar{R}_{x,x}(\tau_1, \tau_2) = M^* [R_{x,x}^*(\tau_1, \tau_2)]; \quad \bar{R}_{x,x}(\tau_2, \tau_1) = M^* [R_{x,x}^*(\tau_2, \tau_1)],$$

$$\bar{D}_x(t) = \bar{R}_{x,x}(t, t) - \int_0^t W(t, \tau_1) d\tau_1 \int_0^t W(t, \tau_2) [\bar{R}_{x,x}(\tau_1, \tau_2) + \bar{R}_{x,x}(\tau_2, \tau_1)] d\tau_2,$$

and

$$\bar{D}_x(t) = \bar{R}_{x,x}(t, t) - M^* \left[\int_0^t W^*(t, \tau_1) d\tau_1 \int_0^t W^*(t, \tau_2) [R_{x,x}^*(\tau_1, \tau_2) + R_{x,x}^*(\tau_2, \tau_1)] d\tau_2 \right].$$

An example is presented to demonstrate the use of all the above techniques. Orig. art. has: 24 formulas and 2 figures.

"The Adaptation of the Botrytis cinerea Pers. Fungus to Some Fungicides."

Bucharest, Natura. Seria Biologie, Vol 15, No 4, Jul-Aug 63, pp 79-82.

Abstract [Author's English summary modified]: Reports on the laboratory adaptation of the fungus to Thiovite and Orthocide 50. Consecutive re-inseminations were made on media with increasing fungicide concentrations. It was not possible to obtain adaptation with Thiovite because of its weak fungicidal activity; with Orthocide 50, however, the authors obtained considerable adaptation manifested as 100 percent faster growth of the cultures grown for a longer period on media containing the fungicide.

Includes 1 graph, 1 table and 2 references, of which 1 Russian and 1 English-language.

AUTHOR: Petrescu, P.; Gheordanescu, V.

ORG: Institute of Physics of the R. P. R. Academy, Bucharest

TITLE: Anisotropy of the photoemission from some colored alkali halides

SOURCE: Physica status solidi, v. 18, no. 2, 1966, 511-515

TOPIC TAGS: crystal anisotropy, alkali halide, alkali halide crystal, color center, photoemission, *ELECTRON EMISSION*

ABSTRACT: Proceeding from the fact that crystals of colored alkali halides after irradiation, exhibit an absorption dependent and the azimuth angle of the plane of vibration of the incident irradiation, an attempt is made to verify whether the electron emission of these dichroic crystals is also a function of this azimuth. The study shows that the dichrosim of the alkali halides is clearly reflected in the anisotropy of the photoemission stimulated by polarized light. The results obtained by a new experimental technique are discussed and compared with those obtained for anisotropic color centers by conventional optical methods. It is believed

Card 1/2

ACC NR: AP7001970

that the new method for the study of anisotropic color centers may provide some information on their orientation and symmetry and thus may help to verify the validity of the corresponding models. Orig. art. has: 5 figures. [Based on authors' abstract] [NT]

TITLE: The frequency response of non-linear automatically regulated systems 9

SOURCE: Automatica si electronica, v. 7, no. 2, 1963, 87-92

TOPIC TAGS: Frequency response, non-linear systems, automatic control, graphical-analytical method

ABSTRACT: The author develops a graphical-analytical method for the study of non-linear and non-inertial systems containing one non-linear element. Starting with a closed system containing one linear element of response $Y(s)$ and one non-linear element of response $f(A)$ he derives the relation:

$$Kf(A) = -Aa(w) \pm \sqrt{b^2(w) \left\{ \left[\frac{a^2(w)}{b^2(w)} + 1 \right] I^2 - A^2 \right\}} \quad (8)$$

Card 1/2

L 18639-63

ACCESSION NR: AP3001814

where $Y(j\omega) = \frac{1}{a(\omega) + jb(\omega)}$

I = input signal

E = output signal

A = I - E

For 2 examples he plots the right and left part of (8) deriving thus A for different values of I, and the frequency ω . Orig. art. has 17 figures, 19 equations.

Title : The Banat Bee Is Becoming Acclimatized In
Muschel-Ristya

Orig Pub: Apicultura, 1957, No 3, 32-33

Abstract: The Banat bee, which has been brought from the western part of the Hungarian low-lands into the pre-Carpathian region (altitude up to 600 meters) proved its worth when interbred with local bees. In Banat (a hilly region of Rumania and Yugoslavia), these bees are considered superior to the Carniolan and Italian species. In Muschel (Rumania) the Banat bees become stronger toward the winter season, and stand the cold

"Preliminary Study of Radioprotection of Mice with Nucleic Acids from Homologous Bone Marrow"

Bucharest, Revista Sanitara Militara, Vol 16, Special No., 1965; pp 409-414

Abstract: Study in mice administered DNA and RNA of homologous bone marrow intraperitoneally and irradiated with 700 r 10 or 30 minutes later. Such treatment sharply reduced the mortality and prolonged life in those mice that did succumb. Table, graph.

Curare-like bisquaternary ammonium salts with amide functions. I. Bis(chloroacetyl) derivatives of *o*-, *m*- and *p*-phenylenediamine, benzidine, and *o*-dianisidine. *J. Biol. Chem.* 123: 123-128 (1938) and *Chem. Ber.* 71: 123-128 (1938).
 Cf. *Chem. Ber.* 71: 123-128 (1938) (in German).
 Condensation of (m.p. given) bis(chloroacetyl)-*o*-phenylenediamine, 208-1°, bis(chloroacetyl)-*m*-phenylenediamine, 215-17°, bis(chloroacetyl)-*p*-phenylenediamine, above 360°, bis(chloroacetyl)benzidine, above 360°, and bis(chloroacetyl)-*o*-dianisidine, 219°, with the corresponding amine (no details given) gave the following (m.p. given): bis(1-piperidylacetyl)-*o*-phenylenediamine, 188-9°; *m*-isomer, 111-12°; *p*-isomer, 217-18°; bis(1-piperidylacetyl)benzidine, 214-15°; bis(1-piperidylacetyl)-*o*-dianisidine, 214°. Condensation with a tertiary amine or pyridine followed by quaternization with an alkyl halide gave (m.p. with decomposition): bis(trimethylammoniumacetyl)-*o*-phenylenediamine dichloride, 168-70°; *m*-isomer, 236-8°; *p*-isomer, 235-8°; bis(trimethylammoniumacetyl)benzidine dichloride, 238-40°; bis(trimethylammoniumacetyl)-*o*-dianisidine dichloride, 240-60°;
 1/1 111

bis(trimethylammoniumacetyl)-*o*-phenylenediamine dichloride, 254-6°; *m*-isomer, 222-4°; *p*-isomer, 219-60°; bis(trimethylammoniumacetyl)benzidine dichloride, 243-4°; bis(trimethylammoniumacetyl)-*o*-dianisidine dichloride, 224-5°; bis(pyridiniumacetyl)-*o*-phenylenediamine dichloride, 111-12° (without decomposition); *m*-isomer, above 360°; *p*-isomer, above 360°; bis(pyridiniumacetyl)benzidine dichloride, above 360°; bis(pyridiniumacetyl)-*o*-dianisidine dichloride, 193-200°; bis(1-methylpiperidiniumacetyl)-*o*-phenylenediamine diiodide, 216-17° (dichloride, 163-5°); *m*-isomer diiodide, 155-60° (dichloride, 212-13°); *p*-isomer diiodide, 237-8° (dichloride, 245-6°); bis(1-methylpiperidiniumacetyl)benzidine diiodide, 239-40° (dichloride, 260-1°); bis(1-methylpiperidiniumacetyl)-*o*-dianisidine diiodide, 223-4° (dichloride, 216-17°); bis(1-ethylpiperidiniumacetyl)-*o*-phenylenediamine diiodide, 193-6° (dichloride, 203-5°); *m*-isomer diiodide, 130-8° (dichloride, 214-16°); *p*-isomer diiodide, 228-9° (dichloride, 230-1°); bis(1-ethylpiperidiniumacetyl)-benzidine diiodide, 258-60° (dichloride, 260-1°); bis(1-ethylpiperidiniumacetyl)-*o*-dianisidine diiodide, 216-8° (dichloride, 251-2°).

Abstract: $\sqrt{\text{CONH}(\text{CH}_2)_2 \text{N}^+ \text{R}^1 \text{R}^{1'} \text{R}^{1''} \text{X}^-} / 2$ an attempt was made in increasing their lipophylic properties by the introduction of 1,2, and 3 aromatic rings in between the quaternary nitrogen atoms. Substances of the following general formula were synthesized: $\text{R} \sqrt{\text{NHCO}(\text{CH}_2)_m \text{N}^+ \text{R}^1 \text{R}^{1'} \text{R}^{1''} \text{X}^-} / 2$, where R = phenylene or diphenylene, m = 1 or 2; $\text{R}^1 = \text{R}^{1'} = \text{R}^{1''} = \text{CH}_3$ or C_2H_5 ; $\text{NR}^1\text{R}^{1'}$ = piperidyl, $\text{R}^{1''} = \text{CH}_3$ or C_2H_5 , $\text{NR}^1\text{R}^{1'}\text{R}^{1''}$ = pyridyl; X = I or Cl), from o-, m-, and n-phenylenediamino (I), from benzidine (II) and from o-dianisidine (III) respectively in which m = 1 and X = I or Cl. These substances were obtained by condensation of CH_3COCl with diamines carrying reactions via bis-

Title : A Study of Hot Smoking Fish.

Orig Pub: Lucrarile Inst. cercetari aliment., 1958, 2,
197-206.

Abstract: Experiments were conducted on hot smoking of the
whole fish of six species: Danube herring, horse-
mackerel, ide, scad, bream, and roach. Optimum
methods for smoking each species were determined.
By a swift rise of the roasting temperature the
general duration of smoking was decreased by 25%.
